**Subject:** Maps

Figure 1 - So far the maps I need would need includes geoprobe sample location. I would like them to be identified by name (ex. A1a;A1b), on the map they would be two different sizes of dots and 2 different colors. The legend would put the depths at which the samples were collected. I would like the fields on the map identified as fields in CSD NMP Fields.

Figure 2 - Next map I would need would include the Field Hach Test Strips and the results by the Hach test strips identified >10 nitrates mg/L (outline of the shape one color for exceeding 10) same color as depths that you choose on figure 1, <10 would be outlined in different color and the other depth would be the same as you chose for the map above.

I would like the fields on the map identified as CSD NMP Fields.

Please let me know if this will look to messy or if you don't think it will work

Thank you.

Cheryl Burdett
